Press release

Prague airport further expands border control solution from secunet

[Essen/Prague, 20 July 2015] **The Czech border police are expanding the EasyGO project at Prague's Václav Havel airport by an additional ten eGates. After successfully implementing the first automated border control gates since the end of 2011, secunet has won the follow-on order in conjunction with the Czech partner Vitkovice IT Solutions a.s. (VITSOL).**

With their decision, the Czech border police have opted for a tried and tested system. The border control solution EasyGO, already declared IT project of the year 2012, will secure the external borders of the Schengen area in future. Since 15 July, six additional eGates are available in the arrivals area and from 20 July a further four will be in operation for passengers in the departures area of Prague airport. secunet will provide not only the "turnkey" easygates but also the entire infrastructure, including the Terminal Control Center, bioserver and the maintenance of ongoing operations for the next few years.

For several years, Prague airport has registered a surge in passenger numbers. The city is acclaimed worldwide, by tourists and business travellers alike. "By choosing the solution from VITSOL/secunet we will continue using a tried and tested system, allowing us to offer our international guests state-of-the-art technology and a high level of security. We are happy to base our systems on the German EasyPASS border control system, which has proven its worth with four million passenger crossings up to July 2015," reports Petr Malovec, Head of the National Border Situation Centre at the Czech Border Police.

Last year, secunet implemented the EasyPASS border control solution for the German federal police at the major German airports, in conjunction with its consortium partner Bundesdruckerei. Dr Rainer Baumgart had the following comment on the new contract in the Czech Republic: "Our experience from many projects and the cooperation with
