PDV-Systeme and secunet Step Up Their Collaboration: Public ECM Platform VIS-Suite Becomes Suitable for the Processing of Classified Information

[Essen/Erfurt, Germany, 12 June 2018] **Software manufacturer PDV-Systeme and IT security company secunet have agreed to integrate the SINA Workflow highly secure cryptographic architecture into the VIS-Suite public ECM platform. The objective of this collaboration is to make highly secure work environments available using certified security architectures and technologies.**

Integration of secunet's SINA Workflow solution into the VIS-Suite public ECM platform from PDV-Systeme is planned in order to process classified documents. The benefit of this is that it will enable classified documents to be processed within a separate security environment (classified information (VS) environment).

The user will be able to register their documents on a "need-to-know" basis, process them in workflows, and issue co-signatures to other participants using the same secure environment. From the time of security classification onward, the relevant documents are available in the classified material repositories in encrypted format.

The joint solution can be used within public authorities, organisations, and companies with standard workplaces, and within a separated environment, and at businesses that use the SINA Workstation which is approved for the German secrecy level VS-NfD.

About PDV-Systeme

PDV-Systeme GmbH has 155 employees and is one of the most high-performing software manufacturers and service providers in the eGovernment sector in Germany. Their integrated approach, which goes far beyond product development, includes the processes of launching the ECM platform, to successful go-live, to complete roll-out and support. PDV-Systeme GmbH received the Platinum Award for the best product in the e-record category in 2016 and 2017, following a user survey run by the eGovernment Computing trade magazine. The company has been nominated for this award again in 2018.
